*[Faint handwritten notes]*

Admission of the following:

Sp. 1000

In aspeny myi Sibircensis

*John A. Bingham*

1. The first step is to identify the problem or question that needs to be answered.

1. *Chlorophyll a* (Chl *a*)

*[Faint, illegible handwritten notes]*

1. The first part of the paper is devoted to the study of the asymptotic behavior of the solutions of the system (1) as  $t \rightarrow \infty$ . It is shown that the solutions of the system (1) tend to zero as  $t \rightarrow \infty$  if and only if the matrix  $A$  is stable. This result is proved by the method of the variation of constants.

Figure 5:  $\log_{10}$  of the relative risk of infection
